FORESTRY FLAIL

STANDARD EQUIPMENT

- three-point hitch cat. II and III
- DOMEX sheet metal body
- internal counterframe with HARDOX sheet metal
- series of internal counter-elements
- front and rear protection with galvanised chains
- support feet
- gearbox without internal freewheel
- cardan shaft with freewheel
- cardan protection boot
- rotor with two-way retractable hammers
- belt transmission
- pair of skids with HARDOX wear-resistant sheet metal reinforcement
- special powder or liquid painting (primer and enamel)

The UFK flail is an ideal piece of equipment in forestry for the mulching of brushwood and undergrowth, light thinning. In agriculture it is designed for the clearing of orchards and the tidying of transit routes, use with rear assembly and reversible guide.

Mod.			 Kg	 (Hp-kw) *	 (g/min.)		 D. Rotor	
UFK- 1550	1550	1310	1310	70-50	540/1000	30	430	4
UFK- 2150	2150	2450	1550	110-80	540/1000	42	430	4

* the horsepower shown are indicative and express the power required by the flail for its operation.
